Xtreme AV Introduces...

QuickSilver™ & QuickSilver GOLD™

Audio & Video Contact Enhancers

Transform Your System... Electrify Your Audio & Video Experience!!!

The Problem

Machined and/or plated electrical contacts, when viewed under a microscope, actually have a “rough” surface finish... allowing less than 5% of the contact’s surface to actually make contact and transfer vital energy to your electronic components... be it AC Power, Audio or Video signals. In addition, these “rough” contacts cause micro-arcing to take place... generating “noise” distortion... which is then transferred and amplified in your system along with the complex, multi-frequency Audio and Video signals – resulting in a dramatic loss in resolution and a less natural 2-dimensional presentation. **It doesn’t have to be this way!**

The Solution

QuickSilver™ (QS) and our **NEW QuickSilver GOLD™ (QSG)** Audio and Video Contact Enhancers... revolutionary products that can MAXIMIZE surface area contact (to nearly 100%) for maximum unimpeded energy transfer... while MINIMIZING micro-arching noise... allowing one’s Audio and/or Video system to function at its full potential! The end result... increased macro and micro-detail resolution and a lowering of the noise floor in both Audio and Video applications... resulting in the most 3-Dimensional audio soundstage presentation... as well as the most vibrant, colorful and life-like 3-Dimensional video presentation imaginable. QuickSilver MUST BE seen and heard to be believed... as this simple-to-use, next generation product can enhance the listening or viewing pleasure of most any Audio and Video system! Guaranteed!

QuickSilver... the Next Best Thing to Hard Wiring Your Entire Audio or Video System!!!

About QuickSilver

Our Xtreme AV design team set out to develop the best SuperConductive Audio and Video Contact Enhancer... cost no object. While developing QuickSilver, we tested 6 types of Silver powders... and 5 different carrier fluids. Our team selected a proprietary, nearly 4N pure, micron-sized SuperConductive™ Silver flake... which is then **cryogenically treated** before being suspended in a proprietary, custom formulated, antioxidant enriched carrier – which was chosen for its dielectric characteristics, heat tolerance, protective properties and exceptional musical presentation qualities. Once satisfied with its sonic and video presentation qualities (actually we were quite amazed and “electrified” by what we discovered), we then obtained an EXCLUSIVE for key QuickSilver materials limited to our Audio and Video Contact Enhancer application worldwide markets.

Then after comparing our QuickSilver to several respected “competitive” Silver-based products in direct A/B evaluations, our designers and Beta Testers unanimously agreed that QuickSilver is vastly superior... in both Audio and Video applications... to any Silver-based contact enhancer or contact treatment on the market today! We are confident enough to claim that when compared to QuickSilver... **there is NO COMPETITION!!!**

The great news is that our industry leading... cryogenically treated **QuickSilver Audio & Video Contact Enhancer is affordably priced at only \$89.00 MSRP for a complete QS Kit... and only \$195.00 MSRP for our NEW "breakthrough" QSG 4.5 Contact Enhancer Kit (ON SALE for \$169.00)...** and **only \$114.00 for our QSG 2.5 Contact Enhancer Kit...** representing truly electrifying and “shocking” VALUES for all Audio and Video enthusiasts worldwide! **The best just got even better!**

QuickSilver™ Dramatically Improves the Audio & Video Experience on Any System!

Audio Benefits

In Audio, QuickSilver allows your electronic components to function at their full potential. The increase in resolution and the lower noise floor allows the musical presentation to become more natural and relaxed... warmer and fuller... less congested... more transparent... open and “airier”... more dynamic and “live” sounding... clearer but with less glare or “edginess” – it’s just simply more emotionally involving and musical!

The high frequencies will become more extended... without “over-brightness” that can lead to listener fatigue. The midrange will be more transparent, sweeter and just blossom... with increased resolution that will allow the listener to hear the previously missing textures of your favorite vocalists. The bass will become more extended and controlled... and pack that dynamic punch.

And the soundstage will become significantly more open, 3-Dimensional and holographic... with a huge increase in soundstage height, width and depth! And at the same time, images will become better focused on the stage...and take on their own 3-Dimensional space and sense of “air”. You can now “Remove the veil... Feel the Energy... Experience the Emotion in Music... and Be There” ...as if you were at the live event!

Video Benefits

With Video and Home Theater systems, the sound improvement will be matched by equally dramatic improvements to video picture quality. Most all users notice an immediate improvement in overall realism and picture quality... although it noticeably improves over the next 120 days!!! Video images will be cleaner, clearer and sharper! Colors will become more vibrant... and the overall contrast will improve... with blacks becoming blacker... and whites becoming whiter! And best of all... you will get a better sense of “realism”... as images take on a more natural 3-Dimensional, holographic life-like quality.

In fact, the overwhelming majority of users need to adjust their display’s color, contrast and sharpness levels down a few notches! And all users agree that analog Cable or Satellite TV images now appear to be much closer to DVD quality... and amazingly more 3-Dimensional! And digital playback such as DVD, digital Cable, digital Satellite... and HDTV images on HDTV compatible Projection, Plasma or LCD displays become extraordinarily holographic and life-like! You can now see quality differences in the production cameras’ lenses and focal depth! And you can also easily make out the depth and position of the graphical layers that are placed on top of the camera’s video image! Wow!

“QuickSilver... is almost like having HDTV in a bottle!!!” Craig Sata · Fort Collins, CO

QuickSilver Break-In Period

While Audio and Video performance enhancements may be seen and heard immediately after QuickSilver treatment...**OPTIMUM Audio and Video benefits are realized once QuickSilver breaks in...** or undergoes a “conditioning” process. **QuickSilver’s two key ingredients... our proprietary Silver and our Dielectric Fluid Carrier... undergo simultaneous conditioning by two distinct processes:**

- 1. Silver Conditioning:** QuickSilver’s high purity cryo-treated Silver undergoes break-in when **subjected to AC or DC current.** With signal, QuickSilver’s Silver atoms realign themselves... forming “super highways” allowing for more efficient and unimpeded energy transfer. **The Silver conditioning process takes between 72 – 96 HOURS where an electrical signal is flowing through the treated connectors.** Connectors carrying higher current signals break in more quickly, while lower current carrying signals take a bit longer... **although QuickSilver’s Silver conditioning process is near completion at approximately 96 HOURS (4 DAYS) of break-in with signal.**
- 2. Dielectric Fluid Carrier Conditioning:** QuickSilver’s anti-oxidant enriched dielectric carrier also **undergoes conditioning... although its break-in time is not signal related... but atmospheric oxygen related.** As the dielectric fluid carrier is exposed to oxygen... it undergoes a polymerization reaction forming longer chain molecules... and becomes a relatively hard solid (that still can be easily removed with Alcohol and a cotton swab). This polymerization not only increases QuickSilver’s ability to protect treated connectors from corrosion, but also causes the carrier to slightly shrink... compacting the Silver particles... increasing the number of Silver-to-Silver particle contact points... resulting in lower resistance across the connector interface. **This is why QuickSilver’s Audio & Video performance gains continue to over the NEXT 14 – 120 DAYS following treatment!!!**

AUDIO BREAK-IN: While you may experience performance gains immediately after QuickSilver treatment... QuickSilver does undergo dramatic changes during its **TWO-STAGE break-in process...** some positive and some temporarily negative. **Please allow 72 – 96 HOURS OF BREAK-IN WITH MUSICAL SIGNAL before forming an initial impression... and THEN WAIT 14 - 21 DAYS FOLLOWING TREATMENT before performing any SERIOUS Audio and/or Video evaluation** in order to allow enough time for the dielectric carrier to undergo its initial oxygen-dependent polymerization reaction. Immediately following application... your system may sound a bit full or lush in the bass and mid frequencies... a little “softer” in the high frequencies... and the soundstage may compress a bit (especially in height). **With 14 - 21 DAYS OF BREAK-IN... expect to experience the increased resolution in a more ideal tonal balance... where the highs become equally resolving and crystal clear... the soundstage expands considerably... and the presentation sounds more natural... yet dynamic!** And it gets even better... as **the overall musical presentation continues to noticeably improve over the next 120 DAYS** as the dielectric carrier undergoes polymerization!

VIDEO BREAK-IN: **Enhanced resolution and color vibrancy are immediately apparent** after QuickSilver treatment... where you may need to adjust your color levels, contrast and sharpness levels down a bit. As the dielectric carrier breaks in... **the images will get noticeably better at around 14 – 21 DAYS after treatment... and will continue to noticeably improve over the NEXT 120 DAYS...** where you may need to adjust/re-calibrate your display’s settings (especially the color level) throughout this time period.

QuickSilver Mixing & Storage Information

QS & QSG are formulated using our EXCLUSIVE nearly 4N Silver in a proprietary, antioxidant enriched high dielectric oil. Separation and/or settling of the Silver from the oil may occur over time. **Be sure to MIX QUICKSILVER FOR AT LEAST 30 SECONDS BEFORE EACH USE to a uniform consistency with the NARROW END of the Kit's Mixing Spatula. MIX QUICKSILVER GOLD FOR AT LEAST 60 SECONDS. REMIX BOTH QUICKSILVER & QUICKSIVER GOLD EVERY 10 – 15 MINUTES when treating your connectors!** Wipe the excess paste off the spatula first with the Retractable Brush, then with a paper towel, and place the cleaned spatula in the Kit for future use. For storage, Xtreme AV recommends that you **place a piece of electrical tape around the cap/jar junction... wrap the complete QS or QSG Kit in aluminum foil... place the tightly sealed foil wrapped Kit in a Zip-Loc bag... and store at ROOM TEMPERATURE.**

30-Day Conditional Money-Back Guarantee

After QuickSilver treatment, we believe you will be amazed with the improvement in your Audio and Video experience – evidenced by increased resolution and natural, lifelike 3-Dimensional presentation qualities. If not, you may return the QuickSilver Kit and unused portion of QuickSilver to the Xtreme AV Dealer where it was purchased (or to Xtreme AV) **within 30 days from the date on your receipt for a full refund** of your purchase price (not including shipping, handling and insurance charges). So what's the catch? **All we ask is that you ALLOW NO LESS THAN 21 DAYS for QS or QSG to initially break-in... along with a thoughtful evaluation.**

Guaranteed Performance

In summary, QuickSilver™ & QuickSilver GOLD™ can be used according to our Application Instructions on any Audio or Video Contacts, allowing you to *“Transform Your System and Electrify Your Audio and Video Experience”*. With our next generation, cryogenically treated QuickSilver Contact Enhancer... performance enhancements over no treatment are simply amazing – and must be seen and heard to be believed! And it's 100% MONEY-BACK GUARANTEED (less shipping/handling charges) to outperform ALL Silver-based competing products – even those nearly double our manufacturer's suggested retail price!

Maximum Audio and Video performance is achieved when QuickSilver & QuickSilver GOLD is used on the following electrical connections:

- Audio Interconnects (Analog & Digital)
- Video Composite or Component Interconnects
- S-VHS Cables
- Video Coaxial Cables
- DVI or SDI Digital Cables
- Speaker Cables
- AC Power Cables
- AC Electronic Component IEC Inlets
- House Wiring to AC Receptacle Connections
- Electronic Component Fuses
- Tube Pins
- Home Theater Installations
- Car Audio Installations

QuickSilver™ Contact Enhancer Kit Contents & Pricing

QuickSilver Customer Kit: The QuickSilver Audio and Video Customer's Kit is conveniently packaged in an attractive, user-friendly, silver hot stamped, black polypropylene box that can be easily transported during the application process.

QuickSilver Kit Contents:

- 1 – **5-gram** Jar of QuickSilver Contact Enhancer · **NOW 25% MORE!!!**
- 1 – Deoxit™ Contact Cleaner (2cc tube)
- 1 – Retractable Brush (for easy QuickSilver Paste Application)
- 10 – Double-Ended Cotton Contact Cleaning Swabs
- 1 – QuickSilver Mixing Spatula
- 1 – QuickSilver Application Instructions
- 1 – Oxygen Absorber Packet

QuickSilver Contact Enhancer MSRP

QuickSilver Audio & Video Contact Enhancer Kit MSRP: \$89.00

QuickSilver GOLD™ Contact Enhancer Kit Contents & Pricing

QuickSilver GOLD Customer Kit: Our NEW QuickSilver GOLD Audio and Video Customer's Kit is conveniently packaged in an attractive, user-friendly, gold hot stamped, black polypropylene box that can be easily transported during the application process.

QuickSilver GOLD 4.5 Kit Contents:

- 1 – **4.5-gram** jar of QuickSilver GOLD Contact Enhancer
- 1 – Deoxit™ Contact Cleaner (2cc tube)
- 1 – Retractable Brush (for easy QuickSilver GOLD Paste Application)
- 10 – Double-Ended Cotton Contact Cleaning Swabs
- 1 – QuickSilver Mixing Spatula
- 1 – QuickSilver Application Instructions
- 1 – Oxygen Absorber Packet

QuickSilver GOLD 4.5 Contact Enhancer MSRP

QuickSilver GOLD Audio & Video Contact Enhancer Kit

MSRP: \$195.00

NOW ON SALE FOR \$169.00!!!

QuickSilver GOLD 2.5 Kit Contents:

- 1 – **2.5-gram** jar of QuickSilver GOLD Contact Enhancer · **NEW SMALLER SIZE!!!**
- 1 – Deoxit™ Contact Cleaner (2cc tube)
- 1 – Retractable Brush (for easy QuickSilver GOLD Paste Application)
- 10 – Double-Ended Cotton Contact Cleaning Swabs
- 1 – QuickSilver Mixing Spatula
- 1 – QuickSilver Application Instructions
- 1 – Oxygen Absorber Packet

QuickSilver GOLD 2.5 Contact Enhancer MSRP

QuickSilver GOLD 2.5 Audio & Video Contact Enhancer Kit

MSRP: \$114.00

Our SAVE EVEN MORE...

Purchase a QuickSilver GOLD™ 4.5 and Liquid Resolution® CD/SACD/DVD/BLU-RAY Enhancer System [Combo Package](#) for \$225.00... and SAVE AN ADDITIONAL \$13.00 over their individual SALE PRICES!!!

Questions?

Please contact the Dealer where you purchased QuickSilver or Xtreme AV if you have ANY questions regarding the application of QuickSilver and/or purchasing information.

Xtreme AV Phone: (949) 488-7662

Xtreme AV Email: quicksilvergold@sbcglobal.net

Xtreme AV Website: www.xtremeav.com

IMPORTANT NOTE: QuickSilver and QuickSilver GOLD work on a micron level... so use only a THIN EVEN coat. WITHIN THE FIRST 14 DAYS... you may connect and disconnect cables UP TO TWO TIMES. AFTER 14 DAYS... due to polymerization break-in of the dielectric carrier... it is recommended to first clean the connectors with Isopropyl Alcohol... and then reapply QS or QSG to these connectors.

Domestic and International Dealer & Distributor Inquiries Welcome.
