The Music Gun™ Pro INT'L 220V-240V Instructions for Use:

IMPORTANT: The following instructions are specific to the INTERNATIONAL Music Gun Pro 220V-240V version that uses the Black & Decker 'Gun' with the European non-grounded two-pin Shuko style male AC plug. This specific Gun offers 3 HEAT SETTINGS (1 = LOW; 2 = MED and 3 = HIGH) and TWO FAN SPEEDS (0 = OFF; 1 = LOW and 2 = HIGH) .

For OPTIMAL RESULTS...

All Optical Discs and LPs need to be treated BEFORE EACH PLAY.

I. Optical Disc Treatment (CDs, SACDs, DVDs, HD-DVDs, Blu-Ray, CD-Rs and DVD-Rs):

NOTE: If using an Optical Disc Cleaner/Enhancer and/or a Demagnetizing Unit... we recommend that one use a quality disc enhancer such as Liquid Resolution™ as the first step... followed by the Demagnetizing Unit such as our X-Demag™ CD/LP or an Acoustic Revive RD-3 demag unit as the second step... and **the Music Gun treatment should be one's last step before playing the disc.**

1. **WARM UP (20 – 30 SECONDS ON MED HEAT 2 and HIGH FAN 2):** Tourmaline creates negative ions when heated. **Warm up the 'Gun' for 20 – 30 seconds BEFORE EACH USE by sliding the TOP HEAT CONTROL TO MED HEAT 2 and the BOTTOM FAN SPEED control to HIGH FAN 2.**
2. **TREATMENT (20 – 30 SECONDS ON MED HEAT 2 and LOW FAN 1):** Keep the **TOP HEAT CONTROL at MED HEAT 2** and slide the **BOTTOM FAN SPEED control down one click to LOW FAN 1**. Then **hold the 'Gun' 1 – 2 INCHES above the READ SIDE of the disc and TREAT FOR 20 – 30 SECONDS.**
3. Repeat for the **LABEL SIDE** of the disc and treat for another **20 – 30 seconds.**
4. Play the disc in the component... and **"Enjoy the Music and Video"!!!**

II. LP Treatment:

NOTE: The Music Gun™ Pro is highly effective when treating **EACH SIDE of an LP BEFORE PLAYING THAT SIDE**. If using a LP Cleaner or LP Demagnetizing Unit... we recommend that one use the LP Cleaner as the first step... followed by the Demagnetizing Unit such as our **X-Demag™** CD/LP or an Acoustic Revive RL-30 Mk III Large LP Demagnetizer as the second step... and **The Music Gun treatment should be one's last step before playing that side of the LP**.

1. **WARM UP (20 – 30 SECONDS ON MED HEAT 2 and HIGH FAN 2)**: Tourmaline creates negative ions when heated. **Warm up the 'Gun' for 20 – 30 seconds BEFORE EACH USE by sliding the TOP HEAT CONTROL TO MED HEAT 2 and the BOTTOM FAN SPEED control to HIGH FAN 2.**
2. **TREATMENT (30 SECONDS ON MED HEAT 2 and LOW FAN 1)**: Lay the LP on the album sleeve **PLAY SIDE UP... treat the PLAY SIDE... and then immediately play that side**. If one has an Acoustic Revive RL-30 Mk III Large LP Demagnetizer... one can treat the play side of the LP simultaneously while the LP is being demagnetized.

TO TREAT THE LP... keep the TOP HEAT CONTROL at MED HEAT 2 and slide the BOTTOM FAN SPEED control down one click to LOW FAN 1. Then hold the 'Gun' **1 – 2 INCHES** above the **PLAY SIDE** of the LP **CONTINUOUSLY MOVING IT IN A CIRCULAR MOTION...** and treat the entire **PLAY SIDE SURFACE FOR 30 SECONDS**.
3. **Play the TREATED SIDE of the LP... and get ready to truly "Experience the Emotion in Music"!!!**
4. **When you are ready to hear the flip side... REPEAT STEPS 1 and 2.**

TREATMENT TIPS: I like to keep The Music Gun™ next to my CD or LP collection... and turn the 'Gun' on the **HIGH HEAT WARM UP** setting on the way to remove the just played CD. I then put that recently played CD in its jewel case... grab the new CD I wish to play... and treat the new CD on the **LOW HEAT TREATMENT** setting.

For LPs... I suggest starting the **HIGH HEAT WARM UP** sequence on your way to flip the LP to hear the other side... and then treat the flip side on the **LOW HEAT TREATMENT** setting.

Stay Tuned... as "YouTube" VIDEOS of the actual treatment steps for all Xtreme AV Products are COMING SOON!!!
