Our Xtreme AV Xionic Tourmo Gun™ is **GUARANTEED**
to help you "Experience the Emotion in Music"!!!

www.XionicTG.com

Dual Voltage Xionic Tourmo Gun™ Instructions for Use:

If you have ordered a **DUAL/VOLTAGE (125V/250V) Xionic Tourmo Gun...** be sure you have the **Voltage Selector dial** located on the handle just above where the power cord enters set to the appropriate **125 V or 250 V MAXIMUM** setting.

For OPTIMAL RESULTS...

All Optical Discs and LPs need to be treated BEFORE EACH PLAY.

I. Optical Discs Treatment (CDs, SACDs, DVDs, HD-DVDs, Blu-Ray, CD-Rs and DVD-Rs):

NOTE: If using a CD Cleaner/Enhancer and/or a Demagnetizing Unit... we recommend that one use the disc Cleaner/Enhancer (like **Liquid Resolution™**) as the first step... followed by the Demagnetizing Unit (like our **X-Demag CD/LP™**) as the second step... and **the "Gun" treatment should be one's last step before playing the disc.**

- 1. WARM UP: Warm the "Gun" for 20 – 30 seconds BEFORE EACH USE by sliding the SINGLE CONTROL UP ONE CLICK to LOW HEAT. DO NOT use the Gun on the HIGH HEAT setting or it will overheat and trip the safety breaker on the plug and shut down.**
- 2. OPTICAL DISC TREATMENT: On the same LOW HEAT SETTING... hold XionicTG ~ 2 – 3 INCHES above the **READ SIDE** of the disc and **TREAT FOR 20 – 30 SECONDS.****
- 3. Repeat for the LABEL SIDE of the disc and treat for another 20 – 30 seconds.**
- 4. Play the disc in the component... and "Enjoy the Music and Video"!!!**

II. LP Treatment:

NOTE: The XionicTG is incredibly effective when treating **EACH SIDE of an LP BEFORE PLAYING THAT SIDE**. If using a LP Cleaner or LP Demagnetizing Unit... we recommend that one use the LP Cleaner as the first step... followed by the Demagnetizing Unit (like our **X-Demag CD/LP™**) as the second step... **the "Gun" treatment should be one's last step before playing the side of the LP.**

1. **WARM UP:** Warm the "Gun" for 20 – 30 seconds BEFORE EACH USE by sliding the **SINGLE CONTROL UP ONE CLICK to LOW HEAT**. DO NOT use the Gun on the HIGH HEAT setting or it will overheat and trip the safety breaker on the plug and shut down.
2. **LP TREATMENT:** Lay the LP on the album sleeve **PLAY SIDE UP... treat the PLAY SIDE... and then place the LP on your turntable's platter.**

On the same **LOW HEAT SETTING...** hold XionicTG ~ 2 – 3 INCHES above the **PLAY SIDE of the LP CONTINUOUSLY MOVING IT IN A CIRCULAR MOTION and TREAT THE ENTIRE PLAY SIDE FOR 20 - 30 SECONDS.**

3. Play the **TREATED SIDE of the LP...** and get ready to truly "Experience the Emotion in Music"!!!
4. When you are ready to hear the flip side... **REPEAT STEPS 1 and 2.**

TREATMENT TIPS: I like to keep my XionicTG next to my CD or LP collection... and turn the "Gun" on the **LOW HEAT WARM UP** on the way to remove the just played CD. I then place the recently played CD in its jewel case... grab the new CD I wish to play... and then treat the new CD on the **LOW HEAT TREATMENT** setting. In addition, one can experiment and treat a CD multiple times to hear the cumulative effect.

For LPs... I suggest starting the **LOW HEAT WARM UP** sequence on your way to flip the LP to hear the other side... and then treat the flip side on the **LOW HEAT TREATMENT** setting.

Stay Tuned... as "YouTube" VIDEOS of the actual treatment steps for all Xtreme AV Products are **COMING SOON!!!**

- **Liquid Resolution™** Optical Disc Enhancer
- **X-Demag™** CD/LP Demagnetizer
- **Xionic Tourmo Gun™** CD/LP Negative Ion Necessity
